

# TOUCHLESS EVERYTHING

## Touchless Destination Dispatch Elevators

### KASTLEPRESENCE SPEEDS UP DELIVERY WHILE REDUCING GERMS AND OVERCROWDING

#### Eliminates Hand Contact

Mobile phone app provides all elevator controls for destination selection.

#### Enforces Safe Occupancy

KastlePresence app only displays floors to which the user has authorized access.

#### Moves Occupants Faster

Faster floor selection directly from cell phone reduces elevator lobby congestion around the kiosk.

### HOW DOES IT WORK?

User needs to touch kiosk / reader to select floor destination, exposing user to germ risk as this is a high touch area in the building.

User opens app and selects the destination floor from among those floors to which he/she has authorized access.

User positions phone near kiosk / reader and display points user to the elevator that they'll take.
