

State-of-the-Art Security Services for Agricultural Sciences Operations

The demands of the Agricultural Sciences industry require higher levels of security than other industries. From cultivation, manufacturing, distribution to compliance and the overall profit margin, there are significant ways access control can affect Agricultural Sciences businesses.

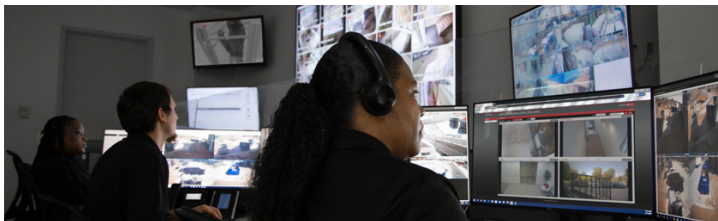

Smart Access

Smartphone-based encrypted credentials provide secure, hands-free access to any space or element with cloud-based system. Add or revoke users, open doors, or view activity reports from anywhere with cloud-based management software.

Cloud-Based Video

View crisp, HD quality live video, and recorded footage remotely from any device with KastleVideo app. By using smart A.I. enabled cloud-based video surveillance technology, instantly receive alerts, verify alarms, review video, record incidents, and easily share clips with management or local authorities.

Kastle Remote Video Guarding

Live remote agents in US-based video operations centers respond to alarms or threats identified by AI-driven cameras. Operators can confront intruders directly over the loudspeaker while notifying the police. Enjoy heightened security 24/7/365 without the cost of additional personnel.

Environmental Control

Kastle critical sensor monitoring protects your Agricultural Science facilities from potential disasters caused by unexpected changes such as temperature changes, equipment tampering, HVAC system indicators, power outages, and rising water levels. Kastle provides immediate notification of critical environmental or system changes so you can act before damage occurs.
