

Kastle Smart Home: Intelligent Multifamily Living

Mitigate Risk. Streamline Operations.
Delight Residents.

Best-in-class apartment communities provide tech-savvy amenities and impeccable security. Kastle is partnering with PointCentral®, an Alarm.com company, to offer smart home automation to Kastle-protected multifamily communities.

This unique partnership of industry leaders brings unprecedented value to multifamily communities by helping property managers keep a pulse on operations through water detection alerts and temperature monitoring. Residents, too, will be delighted by the ability to control their thermostats and lighting from the **KastleResident** smartphone app any place, any time.

Water Detection

A leak can impact multiple apartments, require hours of repair, and cause costly expenses. Smart Home units contain sensors that instantly alert property staff when a problem is detected. Crisis averted.

Smart Thermostat

Do you go from one vacant unit to another to check the thermostat? Free up your staff and save on utilities by using KastleMultiFamily to monitor and control every Smart Home unit's thermostat. Hassle eliminated.

Remote Comfort

Tech-savvy residents – current and future – will prefer an apartment home that lets them control their thermostats and lights from their smartphones. Best in class.
